Re: **Student Assignments**

Hello Students, Parents/Guardians

I hope you are all well over this extended break due to the Covid-19 virus. I have a list of computer web sites you can use while home to increase and improve your technology skills as well as math and reading skills.

These sites are the same ones we use in the technology classroom all year so you should be familiar with them. These sites are kid friendly and safe and incorporate state standards in their lessons.

Parents/Guardians please take time to go over the assignment with your son or daughter. The sites we will be using are fun sites that engage students in meaningful learning activities designed to improve their critical thinking, problem solving, and technology skills, while also keeping them busy doing something they will enjoy.

Thank you.

Student Assignments

Your assignment is to practice your technology skills by using any of the following web sites for at least 20 minutes daily.

interactivesites.weebly.com   play.prodigygame.com/

www.abcya.com   www.typing.com

www.nitrotype.com

If you are using the Typing.com site please log in with your school user name and password if you remember it, otherwise you can create a new account and use it. It is free, and easy to set up. You can also practice typing without an account as well on this site. Please try your best at being responsible students and completing your technology assignments daily while you are home and away from school. Remember, all the technology practice you do helps you to be a more fluent computer user, a more proficient student, and it also prepares you for your future.

Parents/Guardians if your son or daughter in grades 2nd thru 5th has a problem logging into their own accounts at Typing.com, or Prodigy please send me an email at william.fox@bwcs.k12.az.us and tell me whose class they are in and I will do my best to find their personal login information and get it back to you.

Thank you,

Mr. Fox
